Wireless Data Management Systems for Mobile Platforms

The Lasso BT®

High-speed "3G"

- Event Notification
- Theft Recovery
- Door Unlock
- Panic Button
- Speed Notification
- Car/Truck Fleet Management
- In-Cab Office Data
- Digital SMS 1xRTT or GPRS
- Data Logging
- Serial port for mobile data applications
- RG45 and USB ports

Some companies want to know where their vehicles are frequently. The unit is a rugged wireless modem with a GPS receiver that provides a cost effective platform for mobile applications. Monitor idling time, engine on/off, speed reports and accessory usage. Programmable I/O's with analog or digital triggers.

Flexible and Efficient

The Unit can be configured to report its position by time and/or distance. The GPS time is available for precise time-stamping of important events. The external ports provide network connectivity for a laptop, POS terminal, PDA, mobile data terminal and event indicators.
